Description: I'm a coachable developer that loves playing with code, thinking of new ideas, and learning new technologies. I enjoy creating new things with HTML, designing with CSS, and applying functionalities with JavaScript. Seeing ideas come to life is my favorite thing about development and I am growing the skills I currently have and learning new ones.

Education

TrueCoders – Advanced Technical Training – October 2021 – December 2021

The TrueCoders training program is a project and lecture-based training program that aims to fill the growing need for data science and software development roles.

- Over 500 hours of intensive, project-based training in programming languages and other skills, such as Git, HTML, CSS, and JavaScript
- Skills were developed by building multiple assignments and projects (see below)
- Projects were tracked using Git and GitHub for version control

Rutgers University – B.A. in Information Technology and Informatics – May 2021

Minor – Digital Communications & Information

Honors – Summa cum laude, Major GPA: 3.8

The Information Technology and Informatics program develops practical computer-based competencies and unites those skills with ideas from the humanities and social sciences to develop the skills and mindset needed to solve problems where people and machines meet.

Skills

HTML, CSS, JavaScript, React, Git, GitHub, OOP, Restful API, Responsive Design, MS Word, MS Excel, MS PowerPoint

Project Experience

Portfolio Site – CSS | JavaScript | React | Context API

Link: devkev.io

The portfolio site contains all the information and past projects. It was created with React, styled with CSS, and features a Dark Mode created with Context API. It also features a form made with EmailJS.

- Project created using create React App and is mobile responsive
- Project styled with CSS

- Features Dark Mode using Context API
- Features a working contact form made with EmailJS
- Site is mobile responsive

Weather Application – HTML | CSS | JavaScript | API

Link: <https://devkev1.github.io/Weather-App/>

This is a simple weather application made using HTML, CSS, and JavaScript DOM manipulation that calls to an API that fetches weather information based on the user's location (such as city name or zip code) and displays it on the interface.

- Project created using HTML, CSS, JavaScript and is mobile responsive
- Utilized asynchronous JavaScript with fetch API
- Allows the user to input their city name or zip code

Recipe Finder – CSS (Styled Components) | JavaScript | React | API

Link: <https://romantic-kare-aca670.netlify.app/>

This is an app where the user can enter a food ingredient and the app will call an API that fetches food recipes with the ingredient they searched and displays all the recipes on the interface.

- Project created using create React App and is mobile responsive
- Styled components using Styled Components
- Utilized asynchronous JavaScript with fetch API
- Allows the user to input an ingredient

Application Tracker – CSS (Reactstrap) | JavaScript | React

Link: <https://fancy-pastelito-31a01e.netlify.app/>

This is a CRUD (create, read, update, delete) app to keep track of job applications sent out. The user can enter the information of the companies they applied to, and edit and delete each application they input.

- Project created using create React App and is mobile responsive
- Styled components using CSS and Reactstrap
- User can create, read, update, and delete company information (CRUD)
- Information saves locally on the device
